V6 · STEP 7 · JULY 2026 | V6 12 MEMBERS HUB NAVIGATION | DESIGN AUTHORITY — NOT A PAGE | INHERITS V6 00 · V6 01 · V6 02 · V6 09

Members Hub Navigation

Shared design authority for Hub navigation. Every authenticated Hub page — Home, Portfolio, Upload Studio, Membership & Billing, and all pages that follow — inherits this rail, these tabs, this bar. No Hub page defines its own navigation.

Design authority only. No implementation, no tokens, no routing logic. Supersedes the inline rail sketched inside V6 09 — that page now defers to this document.

DEVICE
Fixed 240px left rail · 4 groups

TABLET
Scrollable Hub Tabs · overflow "More"

MOBILE
Hub Mobile Bar · 5 primary + overflow sheet

ROLES
Member · Editor · Moderator · Admin

01 Desktop — Left Rail

Fixed **240px** rail, persistent for the life of the Hub session at ≥1200px. Four groups in fixed order: **STUDIO**, **GROW**, **CLUB**, **ACCOUNT**. A fifth, role-elevated group appears below Account only for Editor, Moderator, and Admin sessions.

MEMBER | CONTENT EDITOR | MODERATOR | ADMIN

↑ Toggle role to see the elevated group appear beneath ACCOUNT.

Member Hub

STUDIO
- Home
- Portfolio
- Upload Studio

GROW
- Photography School — SOON
- Contests — SOON

CLUB
- Tours
- Workshops
- Photo Walks
- Meetups

ACCOUNT
- My Profile
- Membership & Billing

Sign Out

ACTIVE ROLE
Member

Full Hub entitlements. Base four groups only — no elevated section renders. Photography School and Contests remain muted with SOON markers until those modules ship.

RAIL RULE
Exactly one active-item indicator per rail — a small gold dot. No background fills, no left-border accent bars.

GROUP ORDER RULE
STUDIO → GROW → CLUB → ACCOUNT is fixed for every role. Elevated tools append as a fifth group — they never reorder or displace the base four.

Rail is a flex column: logo lockup — 4×5 groups — Sign Out pinned to the bottom via `margin-top: auto`. Group label 11px / 0.18em / ink-400. Item row 44px height, 13px Inter medium. "SOON" items sit at reduced-emphasis ink-400 with a disabled cursor — see §06.

02 Tablet — Hub Tabs

641–1199px. The rail folds into a single horizontal-scroll row of pill tabs directly beneath SiteHeader. Group labels drop; items flatten into one sequence in the same fixed order. Overflow beyond the visible row collapses into a trailing **More ⌄** chip — never a second scrolling row.

HUB TABS — DEFAULT STATE

Home | Portfolio | Upload Studio | Photography School SOON | Contests SOON | Tours | Workshops | More ⌄

ACTIVE TAB
Ink-fill (#141210 on #FAF8F4 text) — the single active indicator on tablet. No underline, no dot. Matches the rail's restraint: one visual signal for "you are here."

MORE CHIP
Fixed as the last chip in the row — it never scrolls out of view. Tapping opens the overflow dropdown documented in §07 Collapsed States, listing Photo Walks, Meetups, My Profile, Membership & Billing, plus any role-elevated items.

03 Mobile — Hub Mobile Bar

≤640px. Fixed bottom bar, five slots. Primary destinations only — the four highest-frequency actions plus a raised centre Upload action, which stays the page's one gold element on every Hub screen. Everything else lives in the More overflow sheet.

375 × 288 — BAR ONLY

Home | Portfolio | Upload | Club | More

SLOT MAP

1	Home	Dashboard root — Studio group's Home item
2	Portfolio	Studio group's Portfolio item
3	Upload	Raised gold circle — Upload Studio, one gold instance per screen
4	Club	Opens Club group as a sheet — Tours, Workshops, Photo Walks, Meetups
5	More	Full nav sheet — Grow, Account, and any elevated group

04 Permission Behaviour

Navigation is role aware on two independent axes. Design authority only — no resolution logic is specified here; that belongs to the engineering RBAC layer.

AXIS 1 — PHASE ACTIVATION
Photography School and Contests are visible to every role at reduced emphasis with a 'SOON' marker until their module ships. This is a platform-phase state, not a role state — it never hides, only mutes. Consistent with V6 00 §07's public-nav "Coming Soon" rule.

AXIS 2 — ROLE ELEVATION
A fifth rail group appears only once a member holds an elevated RBAC role. It is additive — the base STUDIO / GROW / CLUB / ACCOUNT set is identical for every authenticated member regardless of role.

ROLE	BASE NAV (STUDIO · GROW · CLUB · ACCOUNT)	ELEVATED GROUP
Member	Home, Portfolio, Upload Studio, Photography School (soon), Contests (soon), Tours, Workshops, Photo Walks, Meetups, My Profile, Membership & Billing.	None.
Content Editor	Identical to Member.	Journal CMS.
Moderator	Identical to Member.	Moderation Queue.
Admin	Identical to Member.	Admin Console, Moderation Queue, Journal CMS.

Modules appear only after activation — a module absent from every role's nav (e.g. a Phase 3+ feature not yet built) is not rendered at all, not shown disabled. "SOON" muting applies only to modules already announced on the roadmap (Photography School, Contests).

05 Responsive Behaviour

Three fixed breakpoints, matching V6 09's Hub shell. The Hub never stacks navigation above content on mobile — horizontal bars are preferred over a collapsing drawer.

BREAKPOINT	COMPONENT	BEHAVIOUR
≥ 1200px	**HubRail**	Fixed 240px left rail, full group labels, persistent Sign Out footer.
641 – 1199px	**HubTabs**	Horizontal-scroll pill row beneath SiteHeader. Group labels dropped. Trailing fixed "More" chip.
≤ 640px	**HubMobileBar**	Fixed bottom bar, 5 slots, raised gold Upload centre action. "Club" and "More" open bottom sheets.

06 Navigation States

Five item states apply uniformly across rail, tabs, and mobile bar.

Portfolio — DEFAULT
Home — ACTIVE
Upload Studio — HOVER
Contests SOON — COMING SOON
Contests 1 — BADGED

Coming-soon items render at reduced opacity, disabled cursor, no click target — they are never removed from the list. Badged state (small ink-red count circle) is reserved for items with pending user action — e.g. a Moderation Queue count for Moderator/Admin. Never more than one badge visible per item.

07 Collapsed States

The desktop rail never collapses — it is always fully expanded at ≥1200px, per V6 00 §08. Overflow instead collapses into two purpose-built surfaces below.

Tablet — "More" dropdown, open

PHOTO WALKS
Photo Walks
Meetups
My Profile
Membership & Billing

Opens anchored beneath the More chip. Lists everything past the visible tab row, in the same fixed group order, dividers only between groups.

Mobile — overflow sheet, open

GROW
Photography School SOON
Contests SOON
ACCOUNT
My Profile
Membership & Billing

Bottom sheet, drag handle, rounded top corners only (the one radius exception on mobile chrome). Groups not already on the bar render in full, in fixed order, with role-elevated group last.

08 Annotation Index

① **Logo lockup** — 26px square mark + "Member Hub" wordmark, top of rail. Not the public SiteHeader logo; signals the Hub context distinctly.

② **Group label** — 11px / 0.18em / uppercase / ink-400. Never clickable. Fixed order across every role: STUDIO, GROW, CLUB, ACCOUNT.

③ **Active indicator** — 6px gold dot, one per rail maximum. Never a filled background or left border.

④ **Coming Soon marker** — mono "SOON" chip, ink-400 on surface-2. Applies to Photography School and Contests regardless of role.

⑤ **Elevated group** — fifth group, appended below ACCOUNT, present only for Editor / Moderator / Admin sessions per §04.

⑥ **Sign Out footer** — pinned to rail bottom via flex `margin-top:auto`, always visible without scrolling the rail itself.

09 Component Tree

HubNavigation is a single shared authority mounted once per Hub layout, rendering one of three surfaces by breakpoint. Every Hub page (Home, Portfolio, Upload Studio, Membership & Billing…) imports HubLayout — never HubNavigation directly.

```
HubLayout (role ≥ member)
├ SiteHeader (session, member)
└ HubNavigation (hubNav[], role, activeRoute)
  ├ HubRail      [≥1200px]
  │  ├ HubGroup ×4–5
  │  │  └ HubRailItem ×n
  ├ HubTabs      [641–1199px]
  │  ├ HubRailItem ×n (flattened)
  │  └ HubTabsOverflow
  ├ HubMobileBar [≤640px]
  │  ├ HubBarSlot ×5
  │  └ HubOverflowSheet
HubContent (page)
SiteFooter
```

Data contract
HubNavigation reads (member.role, member.entitlements, platform.phasePflags) and a single static hubNav[] tree (groups → items). No page passes its own nav data.

Single source rule
hubNav[] is defined once. Rail, Tabs, and MobileBar all read the same structure — they differ only in presentation, never in content or order.

Auth gate
HubLayout — and therefore HubNavigation — requires role ≥ "member". Unauthenticated or under-authorised access never reaches this component; it redirects to /auth/signin per V6 00 §08.
